

KDAT

STRONGER, STIFFER, AND MORE DIMENSIONALLY STABLE

Upgrade to Culpeper KDAT to enjoy the timeless appeal of natural wood with the unmatched benefits of the kiln dried after treatment process.

During treatment, the wood is completely soaked through in the treatment solution. It is then placed in a large oven (or kiln), to remove the excess moisture and allow the wood to return to its original moisture content. This makes for stronger, stiffer, and more dimensionally stable wood.

FEATURES AND BENEFITS

- Ready to paint, stain, or seal immediately
- Dried to original moisture content
- Increased strength and stiffness
- Lighter weight than freshly treated lumber
- Easier to cut, install, and handle
- Minimizes the natural tendency to shrink, cup, and warp

APPLICATIONS

- Decks
- Trims and window casings
- And more
